

A key focus of the E-Training is the development of an understanding of structural behaviour.

Based on testing and courses taught by David Brohn over the last 35 years, it is clear that this is a skill that still needs to be developed.

Whilst there is more to this understanding than these problems, the ability to solve a range of two-dimensional frames is a good place to start.

Solve these structures

Draw the deflected shape, reactions and bending moment diagram, ignore the self-weight. Draw the bending moment diagrams on the **bending tension** face.

When you have completed your solution, if you then **Register**, we will show you the solutions.
